Re: Building Permit Submittal for Lakefront Estates Development Vacuum Pump Station Foundation

Dear Mr. Dulany:

On behalf of the Lakefront Estates Development, this letter accompanies the building permit submittal for the foundation of the Lakefront Estates Sanitary Sewer Collection System Vacuum Pump Station, located in Glades County.

Amboy General Contractors is the building permit applicant for this submittal.

The purpose of this project is to construct the foundation for the vacuum pump station that will provide the suction required to operate the vacuum sanitary sewer collection system serving the Lakefront Estates development. The vacuum pump station consists of a factory-built modular structure housing which will arrive assembled and installed onto the foundation once completed.

The modular building itself has received State of Florida product approval, and the applicable product approval documentation is included as part of this submittal package.

The building permit being requested under this application is limited to the following scope:

- Construction of the structural foundation system supporting the modular building
- Construction of associated concrete equipment pads, including pads for the generator and odor control equipment

As part of this submittal, the following items are provided for Glades County's review:

- Completed building permit application form
- Signed and sealed engineering drawings for the modular structure foundation and associated concrete work
- State of Florida modular building product approval documentation

No building construction or enclosure design review is being requested beyond the foundation and supporting concrete elements identified above. The modular structure will be installed in accordance with the approved product evaluation and the manufacturer's requirements.

Please do not hesitate to contact us should you require any additional information or clarification during your review

Very truly yours,

Oscar Duarte, P.E.
